

ABSTRACT

A custom-made product providing system allowing a customer to easily select desired components from a wide variety of components is disclosed. A plurality of component maker servers is connected on the Internet, each of which provides component information of a component made by a corresponding component maker on the computer network. A manufacturer server provides a site on the Internet and the site provides a page containing a plurality of selectable items corresponding to component information of respective ones of components made by different component makers.

5

10 A customer terminal connects to the site via the Internet and the customer customizes the product by selectively determining the selectable items on the page.
